"Computers aren't the thing. They are the thing that gets us to the thing." - Halt And Catch Fire

Bio

I am a Postdoctoral Researcher in the MilaNLP Group at the Department of Computing Sciences of Bocconi University. My research activities span hate speech detection and bias mitigation, vision-language multi-modality, and interpretability for NLP. Previously, I worked on modeling and forecasting financial time series to build ML-enabled trading systems.

I am based in Turin. In my spare time, I like reading and watching Sci-Fi, and playing basketball. I am into DIY and automating boring stuff. Besides, I am a passionate learner: I spend countless hours on lectures and tutorials about languages, frameworks, and technologies.

Research interests. Hate Speech Detection, Social Bias in LMs, Vision-Language Multimodality, Interpretable NLP

I update my website more frequently than this document, with recent publications projects, and recent publications.

Education

Politecnico di Torino

PH.D. AT DEPARTMENT OF CONTROL AND COMPUTER ENGINEERING

- Advisor: Elena Baralis

Torino, Italy

Nov. 2018 - Oct. 2022

Politecnico di Torino

MD IN COMPUTER ENGINEERING, DATA SCIENCE TRACK

- Grade: 110/110 *cum Laude*

Torino, Italy

Oct. 2016 - Oct. 2018

Politecnico di Torino

BD IN COMPUTER ENGINEERING

- Grade: 110/110

Torino, Italy

Oct. 2013 - Oct. 2016

Publications

I believe in open-access research. Most of my papers are free to read, and the experimental code is open-sourced whenever possible. All the pointers are collected on my website.

Research projects

The following is a list of research projects I carried out or where I have contributed to the conceptualization of the work. Projects include collaborations with both academic peers and industry.

Fairness in End-to-End Speech Representation Models In this ongoing collaboration, we aim to study how modern neural end-to-end speech models (e.g., Wav2Vec 2.0 or HuBERT) behave on specific subgroups of the dataset. The end goal is to detect bias toward under-represented social groups or recording conditions where models under-perform.

Entities involved: Amazon Alexa AI.

Tackling Inclusive Communication in Italian. E-MIMIC (Empowering Multilingual Inclusive communication) is a joint effort of classical and computational linguistics communities in fighting against non-inclusive, prejudiced language forms. We use modern transformer-based language models to learn inclusive language in written text. Currently, we focus on Academic and Public Administration Italian documents with the goal of non-inclusive content identification and rephrasing.

Entities involved: University of Turin, University of Bologna, University of Bergamo.

Contrastive Language-Image Pre-training for the Italian Language. During the HuggingFace JAX Community Week, we had the chance to specialize OpenAI’s CLIP for the Italian language. CLIP is one of the most recent multi-modal models that connect images and text. The original model is limited to English, so we extended its capabilities. We hence presented the first CLIP model for the Italian Language, trained on more than 1.5 million high-quality image-text pairs. The released model outperforms the multilingual CLIP model on image retrieval and zero-shot classification tasks. The project was selected among the 15 finalist projects - out of 100 - of the Flax/JAX Community Week organized by HuggingFace in partnership with Google and received a special nominee in the final evaluation round.

Entities involved: Bocconi University, University of Milano-Bicocca, University of Groningen.

EvalRS: Rounded Evaluation of Recommender Systems Standard evaluation metrics for Recommender Systems fail to capture important aspects, such as behavioral testing and fairness on subgroups of users. In this project, we proposed EvalRS, an open-source framework, a data challenge, and a workshop (CIKM 2022) to foster more rounded evaluations of RecSys.

Entities involved: Coveo, Coveo Labs, Stanford University, Microsoft, NVIDIA.

Vision and Language Multi-Modality for General Fashion Concepts Learning The cost of training tailored supervised models can be prevented by learning general representations of concepts and reusing them. We show CLIP (Contrastive Language-Italian Pre-Training) can learn general fashion concepts (e.g., long/short sleeves, high/low heels) efficiently and effectively.

Entities involved: Coveo, Coveo Labs, Stanford University, Farfetch.

MALTO: Machine Learning at Polito. I co-founded MACHine Learning At poliTO (MALTO), a university-funded student team at Politecnico di Torino.

The team’s main goal is to participate in various data science competitions. These competitions typically involve achieving high performance on machine learning problems (e.g., classification or regression) and proposing novel, cutting-edge approaches.

Entities involved: Politecnico di Torino.

Unsupervised Learning for Smart Fleet Management. I joined a joint research project between my research group and the company KMaster (Telepass SpA). We designed and implemented an end-to-end machine learning and clustering-based pipeline to characterize driving behaviors and fleet management.

Entities involved: KMaster (Telepass Group).

Academic activities

UNIVERSITY

M2L School. I co-tutored the second edition of the Mediterranean Machine Learning (M2L) Summer School, with ownership of the Natural Language Processing part. We prepared a shared notebook to guide students through 1) implementing a Transformer from scratch, 2) training the model for language modeling and machine translation, and 3) testing on gender bias.

Teaching Assistant. I have been a teaching assistant for several courses at Politecnico di Torino. In total, I have held 171 hours of complementary teaching.

- (2021) **Data science lab: processes and methods**, 60h, MD in Data Science and Engineering
- (2020) **Data science lab: processes and methods**, 39h, MD in Data Science and Engineering
- (2020) **Business Intelligence for Big Data**, 21h, MD in Industrial engineering and management
- (2019) * **Data science lab: processes and methods**, 39h, MD in Data Science and Engineering
- (2019) **Business Intelligence for Big Data**, 21h, MD in Industrial engineering and management
- (2018) **Basi di dati**, 21h, BD in Computer Engineering
- (2018) **The Fourth Industrial Revolution: Promises and Pitfalls in Blending New and Traditional Approaches in Manufacturing and Service Sectors**, 30h, Alta Scuola Politecnica School

* While Introduction to Databases and Business Intelligence were pre-existent and consolidated courses, I have been a major contributor in shaping *Data Science Lab: process and methods*, launched in September 2019 and currently one of the central courses in the Data Science and Engineering master degree at Politecnico.

The course is the first introduction to the Python programming language and the basics of Data Science and Machine Learning libraries for MD students. We worked hard to provide students with comprehensive exercises and solutions (10 laboratories, for a total of 60+ pages of lab exercises and 250+ pages of solutions). All the material is freely available on the course website.

Research Bites. I have devised and contributed to the launch of Research Bites, a series of short research talks and seminars held by Ph.D. students for students of the course Data Science Lab: process and methods. The goal of RBs is to disseminate cutting-edge research topics, in short, high-level pills. The series is now in its second edition.

Master Thesis Supervisor. I have supervised the work of 9 master students.

INDUSTRY

I have held consulting hours and courses twice.

- (2021) **Data Theory: Data Visualization with Python**
Reply: Digital Services, Technology and Consulting, Turin (online)
- (2020) **Python technologies for Data Analytics**
Applied Mechatronic Engineering & Technologies, Turin

PEER REVIEWING

I reviewed at least one work submitted to the following venues:

- ACL Rolling Review. Editions: 2021, 2022

- ACM KDD SIGKDD Conference On Knowledge Discovery And Data Mining. Editions: 2020, 2021
- ACM SIGMOD/PODS International Conference on Management of Data. Editions: 2021
- IEEE ICDE: IEEE International Conference on Data Engineering. Editions: 2020
- IEEE ICDM: IEEE International Conference on Data Mining. Editions: 2021
- ACM SAC: ACM/SIGAPP Symposium On Applied Computing. Editions: 2021
- EDBT: International Conference on Extending Database Technology. Editions: 2020, 2021
- DaWaK: International Conference on Big Data Analytics and Knowledge Discovery. Editions: 2019, 2021

I reviewed at least one work submitted to the following journals:

- Expert Systems With Applications, Elsevier
- Future Generation Computer Systems, Elsevier
- Machine Learning With Applications, Elsevier

Work Experience

Kupata S.r.l.

FOUNDER

Torino, Italy

Nov. 2016 - 2020

- Kupata's main goal is to streamline the Lost and Found process. It brings innovation with a solution that helps people in returning items in a simple, secure, and undisclosed way. The business involves a physical object, the Kupa, and a social community that encourages members to act in the right way.

Consoft Sistemi S.p.A.

CURRICULAR INTERN

Torino, Italy

Mar. 2016 - Jul. 2016

- I participated to the bootstrap phase of the Consoft's proprietary Knowledge Base platform. We built our solution upon Orange HRM, an open source PHP-based platform.

Skills

I am familiar with *italicized* entries.

Programming Python, C, C++, Java, C#, *JavaScript, PHP, Matlab, SQL*

Deep Learning PyTorch, Tensorflow, JAX, Keras

Framework *Apache Hadoop, Apache Spark*

Scripting Bash, Awk

DevOps AWS, GCP, Docker

Front-end Hugo, React, Dash

Graphics Inkscape, GIMP, Blender, Unity 3D

Languages Italian, English, *Spanish, French*
